

## Whitepaper ChessCoin 0.32%

Chesscoin should be able to be installed worldwide under a minimal technical uptake and a full node should be operated: Standard should be typical OS (operating system), Including: Ubuntu, Windows, Macs, Raspberry and Smartphone systems.

- Chesscoin should always be on the latest OS

When writing this text, this is

Ubuntu 25.04

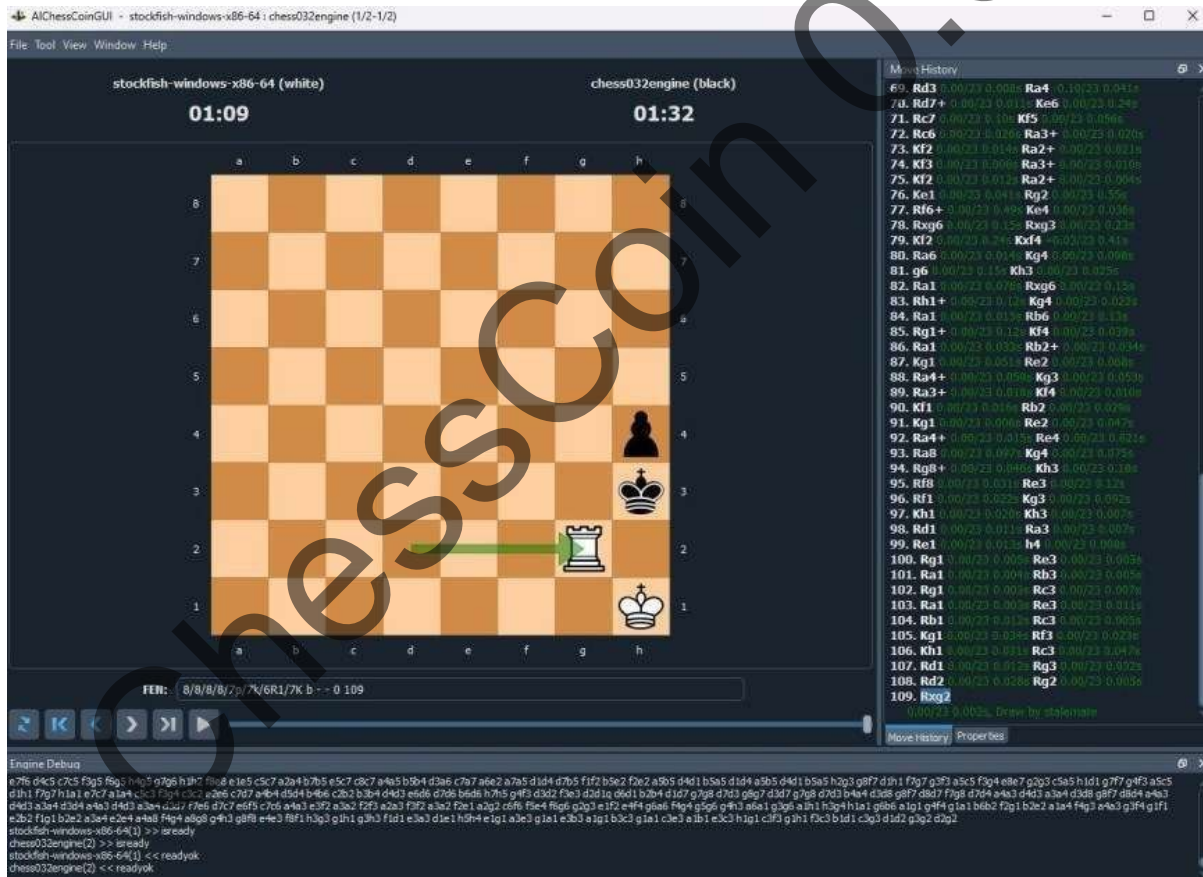

Windows11 and

Raspberry Pi 5

(Mac support is very difficult but not impossible)

with Play Chess in our GUI version:

- Chesscoin addresses can be shown as QR codes. These should work on all ChessCoins clients and thus enable the reading of Chesscoin addresses with a camera.
- Burn Coins
- Blockexplorer
- Chess Coin
- Webbrowser
- Chat 1.0 and
- Chat 2.0
- Play chess with our Chess Computer (Website) and with Play Chess in our GUI version:

More chess engines at:

<https://github.com/ChessCoin032/ChessCoin032-ChessEngines>

## Technical Overview Mainnet:

Consensus Mechanism (Algorithm Script (PoW) + Proof of Stake (PoS) Chesscoin employs a hybrid PoW/PoS model:

Proof of Work: Provides initial distribution and ensures security.

Proof of Stake: Validates transactions using coin holdings, reducing energy costs.

- Blockchain Structur: Script
- Block size: max 2 MB and 21000 transactions per block
- Block time: 5 minutes

## Technical Overview Binance Smart Chain: (BSC; Bep-20)

<https://bscscan.com/>

Token ChessCoin032 (CHESS)

<https://bscscan.com/token/0x9ca5dfa3b0b187d7f53f4ef83ca435a2ec2e4070>

Economic Model:

Total Coin Mainnet and BSC Supply:

- Staking on Mainnet and Bep-20 (Mainnet is infinite by staking (reward of 0.32%) and Bep-20 is 100 Mil.)
- Burn coins on Mainnet and Bep-20
- 25% of all coins are currently burned coins
- Transaction FEES: 0,0001chess via each KB

Annotation:

‘Roadmap’ and ‘schedule’ have become rather unclear terms. Projects make promises that don’t get fulfilled.
